Software Engineer II on Uber's Pinot team, building high-throughput, low-latency distributed systems serving 200M+ queries/day. 3 years specializing in real-time OLAP infrastructure, performance optimization, and reliability at scale.

EXPERIENCE

- Uber India** | *Software Engineer II - Pinot* June 2023 – Present
- Built core infrastructure (routing, caching, client libraries) and integrations for a Pinot query proxy(Cellar), contributing to its Tier-1 readiness serving **100M+ queries/day**.
 - Led ARM benchmarking and JRE17 migration for Pinot, achieving **20–33% cost reduction** per vCPU, **70–90% query latency improvement**, and **80% GC reduction** across production clusters.
 - Improved reliability and feature capability of Neutrino, a Tier-0 Pinot proxy service serving **200M+ queries daily**, by extending UDFs, resolving critical production issues, and strengthening deployment safety.
 - Designed and implemented a pluggable Access Control framework for the Pinot Controller, integrating with Uber's internal Authorization infrastructure to **close critical security gaps** in the real-time analytics stack.
 - Contributed to **Apache Pinot OSS** implementing **performance optimizations** (query short-circuiting, API fanout improvements), **reliability fixes** (MSE join feature flag, bounded thread pool), and **security enhancements** (Minion AuthProvider, increased AC coverage) to improve production robustness.
- Uber India** | *Software Engineering Intern* May 2022 – July 2022
- Built a feature release manager for Spark version upgrades, automating rollout workflows, post rollout observability and reducing developer dependence.
- Uber India** | *Software Engineering (UberSTAR) Intern* May 2021 – June 2021
- Developed a comprehensive A/B testing suite for Apache Spark based services in Java, automating workflow testing and enabling early detection in production data pipelines.
- Ceph** | *Google Summer of Code* June 2021 – Aug 2021
- Integrated Ceph's Redmine-based issue tracker into the Ceph dashboard, enabling seamless bug reporting and CLI-based issue management.
- Public Lab** | *Outreachy* June 2020 – Aug 2020
- Revamped the Public Lab website and productionized a Jest + Puppeteer E2E testing suite to improve release reliability.

TECHNICAL SKILLS

Languages: Java, Go, Python, C++, Rust, SQL

Technologies: Apache Pinot, Apache Spark, Apache Kafka, Apache Flink, Kubernetes

Areas of Focus: Distributed Systems, Real-time Data Processing, OLAP

EDUCATION

IIT Roorkee July 2019 – May 2023
Bachelor of Technology in Civil Engineering CGPA: 8.604/10

LEADERSHIP/EXTRACURRICULAR

Apache Pinot OSS | *Active Contributor*

Rebuilding Uber's Apache Pinot™ Query Architecture | *Uber Blog* Oct 2025

Serving Millions of Apache Pinot™ Queries with Neutrino | *Uber Blog* Dec 2024

Software Development Section (SDSLabs) | *Developer* Jan 2020 – May 2023

ACHIEVEMENTS

InterIIT Digital Alpha's SEC Filing Analyzer | *Silver Medal*

HAB59 Hackathon | *First prize*

InOut7.0 | *First runner-up*
